Mobile application and / or embedded unit box allowing to assess responsible driving

The product is an application that can be installed on the driver's mobile phone and / or embedded in a motor unit provided by the insurer. It assesses both eco and safe driving, making a synthesis of the two criteria and then assigning an overall mark of responsible driving. Rather than considering this application as a "snitch", the driver is encouraged to accept it and adapt his driving style accordingly. Points earned allow the driver to get coupons from retail partners.
